9 June 2010

Norwich Park Block – First Three Wells in Vermont CSG Prospect Average Over 63 metres of gassy coals

The Directors of Bow Energy Ltd (ASX:BOW) are pleased to provide a progress report on the drilling program currently underway in the Norwich Park block, ATP 1031, (Bow 100%) located approximately 300 km north-west of Gladstone, Queensland. Bow has identified three potentially high potential CSG prospects within this block, Vermont, Dysart and Norwich. Bow has completed the initial drilling program on the Vermont CSG Prospect.

VM-3, the third core hole well in the Vermont CSG Prospect of the Norwich Park block intersected over 62 metres of gassy coals to a depth of 825 metres including 24.3 metres of coal from the Fort Cooper coal measures and 37.7 metres of coal from the Moranbah coal measures. The three wells completed intersected an average of approximately 63 metres of gassy coals and confirm the prognosed coal depths and thicknesses across the Vermont CSG Field. Analysis of gas contents, composition and saturation is underway.

During the forthcoming quarter, Bow will commence an appraisal program on the Vermont CSG Prospect with the intention of accelerating reserves definition and certification programs.

A summary of three core wells drilled to date is set out below:

Well	Spud Date	Total Gassy Coal Intersected	Current Status
VM-1	20/12/09	52 metres	Core drilling completed to total depth of 785 metres.
VM-2	17/4/10	77 metres	Core drilling completed to total depth of 806 metres.
VM-3	21/5/10	62 metres	Core drilling completed to total depth of 825metres.

The drilling rig will complete casing on VM-3 before demobilising and commence drilling on the further four core holes scheduled in the Dysart and Norwich prospects. An additional coring rig is expected to commence next month to expedite the 2010 drilling program.

Bow is currently targeting 100 PJ 2P and 1,200 PJ 3P gas reserves by end calendar 2010 on the Norwich Park block of which these three prospects form part.

Competent Person Statements

MHA - The estimates of gas reserve and resources for the Comet Block (ATP 1025P) and Don Juan CSG Field (ATP 771P) has been prepared by MHA Petroleum Consultants, LLC (MHA) in accordance with the definitions and guidelines set forth in the 2007 Petroleum Resources Management System approved by the Society of Petroleum Engineers. The reserve statement has been compiled by Mr Timothy L Hower Chairman of MHA, together with personnel under his supervision. Mr Hower, who has over 28 years industry experience, and MHA have consented to the inclusion of the technical information contained in this announcement in the form and context in which it appears.

MBA – The estimates of gas in place estimates for the Norwich Park (ATP 1031P), Gonyah Block (ATP 1053P) and Bandanna Project (ATP 805P) has been prepared by Mr Doug Barrenger of MBA Petroleum Consultants Pty Ltd (MBA). Mr Barrenger has more than 25 years of experience in the petroleum industry and 10 years of experience in the coal seam gas industry.

Bow – Other technical information contained herein is based on information compiled by the Company's Chief Operating Officer, Vic Palanyk, who has more than 15 years experience in coal seam gas.

About Bow Energy Ltd

Bow Energy Limited (ASX:BOW) is an S&P ASX 200 All Australian Index and S&P ASX 300 Index Company. The company's primary business is the discovery and commercial production of Coal Seam Gas (CSG) and conventional oil fields, with projects in several of Australia's producing basins.

The company is focused on expanding its CSG reserves, with eight CSG projects located within the highly prospective Bowen and Surat Basins of Queensland, and developing production for domestic and export natural gas customers.

The company has GIP potential across its CSG projects of over 13.8 Tcf and to date has certified net gas reserves of 2,360 petajoules (PJ) of 3P and 114 PJ of 2P. A record drilling program is underway for 2010, targeting year-end reserves of 4,128 PJ of 3P and 455 PJ of 2P.

Bow is currently developing the Blackwater Power Project, Bow's 100% owned 30 megawatt power station near Blackwater, central Queensland, which is scheduled for commissioning by the end of the first quarter 2011.
